

The image features a collection of creative cement tiles with various organic ink designs. The tiles are arranged in a grid, with some tiles featuring large, stylized leaf patterns, others with circular motifs, and others with geometric patterns like zig-zags and interlocking circles. The designs are rendered in a light, earthy tone against a darker background. The overall aesthetic is modern and natural. A wooden beam is visible in the top left corner, and a dark, curved object is partially visible on the left side. The text 'DGEUM' is prominently displayed in the center, and 'CREATIVE CEMENT TILES DESIGNED WITH ORGANIC INKS' is written in a smaller font below it.

## EN

We have created real cement pieces, hand pressed and dried at room temperature for 28 days. The robustness of our pieces is acquired in a natural way achieving low emission pieces. Thanks to this natural drying process we will never find two equal pieces.

After 28 days of drying, we moisten our pieces again and we age them in a traditional way to close the porosity of the cement and accentuate its textures. Each piece acquires small imperfections that make it unique and inimitable.

Once this process is finished, we calibrate the pieces in the formats 15x15x1,1 cm and 20x20x1,3 cm to facilitate their placement. Both formats are suitable for use in flooring or wall cladding.

Afterwards, we print our designs on the pieces, using organic inks that penetrate the cement. The inks fuse with the cement, creating a surface that exhibits the natural textures of the cement.

Finally, we treat our pieces to reduce their absorption and brush them one by one to give them that brightness that is so characteristic of authentic cement.

## ES

Hemos creado piezas de auténtico cemento, prensadas a mano y secadas a temperatura ambiente durante 28 días. La dureza de nuestras piezas se adquiere de forma natural consiguiendo unas piezas de bajas emisiones. Gracias a este proceso natural de fraguado nunca encontraremos dos piezas iguales.

Tras los 28 días de secado, humedecemos de nuevo nuestras piezas y las envejecemos de manera artesanal para cerrar la porosidad del cemento y acentuar sus texturas, cada pieza adquiere pequeñas imperfecciones que la hacen única e inimitable.

Una vez terminado este proceso, calibramos las piezas en los formatos 15x15x1,1 cm y 20x20x1,3 cm para facilitar su colocación. Ambos formatos son aptos para uso en pavimento o revestimiento.

Después, imprimimos nuestros diseños sobre las piezas, utilizamos tintas orgánicas que penetran en el cemento, las tintas se fusionan con el cemento formando una masa de color que nos muestra las texturas naturales del cemento.

Por último tratamos nuestras piezas para reducir su absorción y las cepillamos una a una para darles ese brillo tan característico del auténtico cemento.

## FR

Nous avons créé de véritables pièces de ciment, pressées à la main et séchées à température ambiante pendant 28 jours. La robustesse de nos pièces s'acquiert de manière naturelle en obtenant des pièces à faible émission. Grâce à ce processus de séchage naturel, nous ne trouverons jamais deux pièces égales.

Après 28 jours de séchage, nous humidifions à nouveau nos pièces et nous les vieillissons de manière traditionnelle pour fermer la porosité du ciment et accentuer ses textures. Chaque pièce acquiert de petites imperfections qui la rendent unique et inimitable.

Une fois ce processus terminé, nous calibrons les pièces dans les formats 15x15x1,1 cm et 20x20x1,3 cm pour faciliter leur placement. Les deux formats conviennent pour une utilisation dans les revêtements de sol ou de mur.

Ensuite, nous imprimons nos dessins sur les pièces, en utilisant des encres organiques qui pénètrent dans le ciment. Les encres fusionnent avec le ciment, créant une surface qui présente les textures naturelles du ciment.

Enfin, nous traitons nos pièces pour réduire leur absorption et les brossons une à une pour leur donner cet éclat si caractéristique du ciment authentique.

## DE

Wir haben echte Zementfliesen hergestellt, die von Hand gepresst und 28 Tage lang bei Raumtemperatur getrocknet wurden. Da die Robustheit unserer Fliesen auf natürliche Weise erworben wird, erhalten wir ein emissionsarmes Produkt. Dank dieses natürlichen Trocknungsprozesses werden wir nie zwei gleiche Fliesen herstellen.

Nach 28 Tagen Trocknung befeuchten wir unsere Fliesen wieder und altern sie auf traditionelle Weise, um die Porosität des Zements zu schließen und seine Struktur zu betonen. Jedes Stück erhält kleine Unregelmäßigkeiten, die es einzigartig und unnachahmlich machen.

Nach Abschluss dieses Prozesses kalibrieren wir die Teile in den Formaten 15x15x1,1 cm und 20x20x1,3 cm, um ihre Platzierung zu erleichtern. Beide Formate sind für den Einsatz in Boden- oder Wandverkleidungen geeignet.

Anschließend drucken wir unsere Designs auf die Stücke und verwenden dabei organische Farben, die in den Zement eindringen. Die Farben verbinden sich mit dem Zement und bilden eine Oberfläche, die die natürliche Struktur des Zements aufweist.

Zum Schluss behandeln wir unsere Stücke, um ihre Absorption zu reduzieren, und bürsten sie einzeln, um ihnen die Helligkeit zu verleihen, die für echten Zement so charakteristisch ist.

## TECH SPEC

### 1. PRODUCT TYPE

Our tiles are made of white or grey cement, pressed by hand and designed with organic inks. Due to the cement and our manufacturing process each piece has small imperfections that make them unique and unrepeatable. They are pieces of cement and some precautions must be taken.

### 2. PLACEMENT

- 2.1. Support should be flat, clean and dry.
- 2.2. Apply uniformly mortar like Kerakoll H40 Eco Flex using a notched trowel and place dry tiles without holes under them.
- 2.3. For the grout use a special product with colour similar to our tiles. The grout is of cement and adheres to our tiles modifying slightly its final color.
- 2.4. Clean with a sponge and plenty of water before the grout begins to dry.

### 3. CLEANING & MAINTENANCE

- 3.1. Clean with water and neutral soap.
- 3.2. The designs are made with organic inks that penetrate in the cement, do not use chemical or abrasive products for cleaning.
- 3.3. If you want to reduce the absorption in the tiles you can use natural waxes.
- 3.4. No claims will be admitted for causes that violate the exposed information.

### RECOMMENDED GROUTS

We recommend setting the tiles with 2 mm joints and using a specific grout such as Fugabella Eco Porcelana 0-5 (Kerakoll) or Keracolor FF (Mapei)

Fugabella Eco Porcelana 0-5	Keracolor FF
02 Light Grey	111 Silver Grey
04 Iron Grey	112 Medium Grey
05 Anthracite	113 Cement Grey

## DGEUM COLLECTION SUSTAINABLE LIFESTYLE

At Dgeum we think about a sustainable future, that's why we have created a product manufactured in a sustainable way.

Our tiles are hand pressed and hardened at room temperature for 28 days.

The hardness of our tiles is obtained naturally, without firing or emissions in our manufacturing process, so the result and our commitment is to obtain exclusive tiles with low emissions.
